

## Car airco cleaner

### The first environmentally friendly air conditioning Car Cleaner on a probiotic basis!

Interior fresheners are not cleaners and only mask the unpleasant smell. Green XL cleans the air conditioning on a probiotic basis, so that you, your mechanics and your customer do not get any toxic substances. You are doing business in a socially responsible manner, it easily brings extra turnover. With the Green XL car airconditioning cleaner you can now carry out this maintenance in a safe and environmentally friendly way!

### Your benefits of Green XL

- Cheaper (than many other car air conditioning cleaner)
- Turnover (increase workshop turnover in a simple way)
- Easy to apply
- Green and environmentally friendly (Corporate social responsibility)
- No toxic substances (safe for you, your mechanics and your customers)

### Cleaning with probiotics in car airco how does that work?

The cleaning effect of probiotics is comparable to the cleaning effect of organic soap. This cleans for a long time after the bacteria (probiotics) are applied in the air conditioning. As soon as the probiotics come into contact with organic material (pollution), the spores in which the bacteria are found germinate. The contamination is digested and cleaned up by enzymes produced by the bacteria. The bacteria sporulate again when the pollution has been cleaned up and in this way keep the air conditioning clean for several months. This ensures an optimally functioning air conditioning. Continuous cleaning means that no biotope can develop on which microorganisms can thrive.

## Car airco cleaner

### The advantages:

- ✓ Easy to apply
- ✓ Can be processed in a wet stove house
- ✓ 100% natural
- ✓ Safe for you and your environment
- ✓ Saves our environment
- ✓ No toxic substances
- ✓ Prevents risks of chemical accidents (without chlorine and acids)
- ✓ Non-aggressive and non-corrosive
- ✓ Is completely safe for skin and clothing.
- ✓ Promotes a healthy indoor environment.
- ✓ Reduces the risk of allergies

## Car airco cleaner

But because we still have to use alcohol with an aerosol to be able to bring it dry in the car environment our quest has continued to get it even greener and clp free. ( CLP stands for 'Classification, Labeling and Packaging' or the classification, labeling and packaging of chemical substances and mixtures and refers to the European Regulation (EC) No. 1272/2008.) From 2019 we release a totally green concept, complete CLP free. We bring this car air conditioning cleaner together with an ultrasonic machine.

In 2016 we started with an aerosol with 150 ml content, the first green solution for car air conditioning cleaning. This cleaner is simple to use. <https://youtu.be/LGsVVIgq5x0>
