

Pond Products

We at Green XL are specialized in developing green products that can put and keep your pond in top condition. Thanks to our extensive network of specialists in pond maintenance and product suppliers, we can set up a product line for the pond that promotes perfect and healthy water quality.

Our product line ensures a perfect balance of water values in your pond, but also the bacterial household has been considered, among other things our products ensure a perfect micro balance and the restorative effect of flora and fauna.

Are we wizards? NO

Due to overdue maintenance, it may be that certain actions have to be taken first in order to start from scratch, your pond specialist can help you with this. Afterwards or immediately you can use our product line to put your pond in top condition and be kept in top condition.

GREEN XL MAKE SURE YOU HAVE FUN WITH YOU POND!

On this moment we working together with Waterplantenkwekerij R. Moerings.

Mineral power

There are no minerals in tap water. Green XL Mineral power tablets contain 63 types of minerals. The minerals are distributed by their effervescent effect of the tablet and absorbed by the water. Green XL Mineral Power ensures perfect growth for oxygen and water plants, clear pond, binding of dirt particles and stimulates bacterial development, especially when using Green XL Pond Pro.

Pond Pro

By adding Green XL Pond Pro to the pond water, good bacteria are introduced into the water that immediately get rid of all nutrients that are otherwise available to germs. This reduces the risk of pathogenic bacteria. Because the Probiotic bacteria are very active, they will quickly dominate the pond and ensure a healthy and stable microflora of your pond water.

The waste products that are formed in ponds and cause cloudiness of the water, pollute the filter and are a breeding ground for germs, are broken down in the short term. The result is a clear and pure pond with a healthy and hygienic composition of the water. Make sure that no other bacteria are added for a perfect effect.

Green XL bacteria stimulate and support the required nitrogen cycle in the filters. If due to circumstances medication is nevertheless required, add Green XL Pond Pro again immediately after treatment to quickly restore the microflora to a stable condition.

The results are visible from 1 week to 4 weeks after treatment. You continue to administer Green XL Pond Pro during the pond season. For expert advice, ask your pond specialist for the correct treatment plan.

Safe?

Green XL Pond Pro is neutral, fully biodegradable and safe for humans and animals. An overdose has no adverse consequences and at most ensures a longer lasting effect of the bacteria. We recommend the recommended start-up and maintenance dosages.

The advantages!

- ✓ A crystal clear pond
- ✓ Keep the pond clean
- ✓ Breaks down waste products
- ✓ Reduces algae growth
- ✓ Prevents the production of algae
- ✓ Clear green water
- ✓ Clears and maintains pond walls of film layer (biofilm)
- ✓ Keep fish healthy
- ✓ Ideal for swimming pond

BIO BOOST

Green XL Bio Boost ensures that the sludge layer is reduced and the Bacteria creature on the bottom is activated. Works perfectly with the Pond pro. The mineral content also improves. Regular administration breaks down the sludge formation to a few centimeters per year. Accelerates the biological digestion of leaf litter, plant remains and fish excrement.

The advantages!

- ✓ Restores soil life
- ✓ Provides clear water
- ✓ Provides healthy fish and plants
- ✓ Keep the Ph value stable
- ✓ Increases the oxygen content, which activates the bacteria
- ✓ Improves the mineral content

GH plus

The average water hardness or GH value must be between 8 - 12. This value indicates how many minerals, including calcium and magnesium, are dissolved in the water. These minerals are necessary for CO₂ transport, binding of harmful substances to prevent acidification of the pond water and essential for the growth of all aquatic plants. By using Green XL GH Plus you increase the water hardness. With a strong deviation from the ideal values, most natural processes in your pond cannot take place. The plants extract minerals and rainfall causes the GH value to drop. It is therefore important to administer Green XL GH Plus regularly.

1 kilo provides an increase of 1 gH with 32000 liters of water.

2.5 kg provides an increase of 1 gH with 80,000 liters of water.

The advantages!

- ✓ Retain the values for a long time
- ✓ Ensures good CO₂ transport
- ✓ Ensures better plant growth
- ✓ Ensures clear water
- ✓ Prevents acidification
- ✓ Increases amount of minerals and salts

Safe?

Green XL GH Plus is completely biodegradable and safe for humans and animals. This product is Food proof.

KH plus

The average carbonate hardness or KH value must be between 6 - 8. This value indicates the connection between calcium, magnesium and CO₂ value. The CO₂ value is important for oxygenating plants. So if the KH value is high enough, there is also enough CO₂. By using Green XL KH Plus you increase the carbonate hardness. With a strong deviation from the ideal value, most natural processes cannot take place in your pond. A good KH value is important for clear water and healthy plants. The plants extract minerals and rainfall drops the KH value. It is therefore important to administer Green XL KH Plus regularly.

1 kilo provides an increase of 1 kH with 35,000 liters of water.

2.5 kg provides an increase of 1 kH with 87,500 liters of water.

Safe?

Green XL KH Plus is completely biodegradable and safe for humans and animals. This product is Food proof.

The advantages!

- ✓ Hold the values for a long time
- ✓ Ensures better plant growth
- ✓ Ensures clear water
- ✓ Ensures healthy fish and plants
- ✓ Keeps the Ph value stable

Bio korrel

Green XL Bio Pellets are the fundament of health and fertility at the bottom of your pond. Use of these porous pellets prevents the rotting of roots of completely submerged oxygen plants in the pond, promoting their growth instead. The pellets also remove phosphate from the water to the benefit of root and plant growth. They maintain an ideal microbiological equilibrium in the pond, whereby the plants absorb nutrients, with oxygen-rich water as a result.

Instructions:

Place pond plant in larger plant basket and top up with Green XL Bio Pellets. Green XL Bio Pellets are ideal for the top-layer plants in a pond used for natural filtration.
